

Patent acquisition finished in Japan, United States, China.

Medical device for emergency hemostasis

J-PAD

Medical device notification number 38B1X00001100004

No Drugs or Chemicals

No drugs or medications or chemicals are used to stop bleeding, therefore there is less risk of an allergic reaction.

Protection of the wound

Rebleeding is not caused when the pad was removed from the wound. Because the pad maintains the wet environment of the wound.

Quick hemostasis

Quick hemostasis is possible. (comparison with gauze)

Protection from secondary infection

By the adoption of the waterproof backseat, the body fluid of the injured person does not touch the rescuer directly.

Simple handling

Cover a wound with the pad and fix it with bandage or tape. The technical knowledge is unnecessary.

Inexpensive

A price is lower than other emergency hemostasis articles.

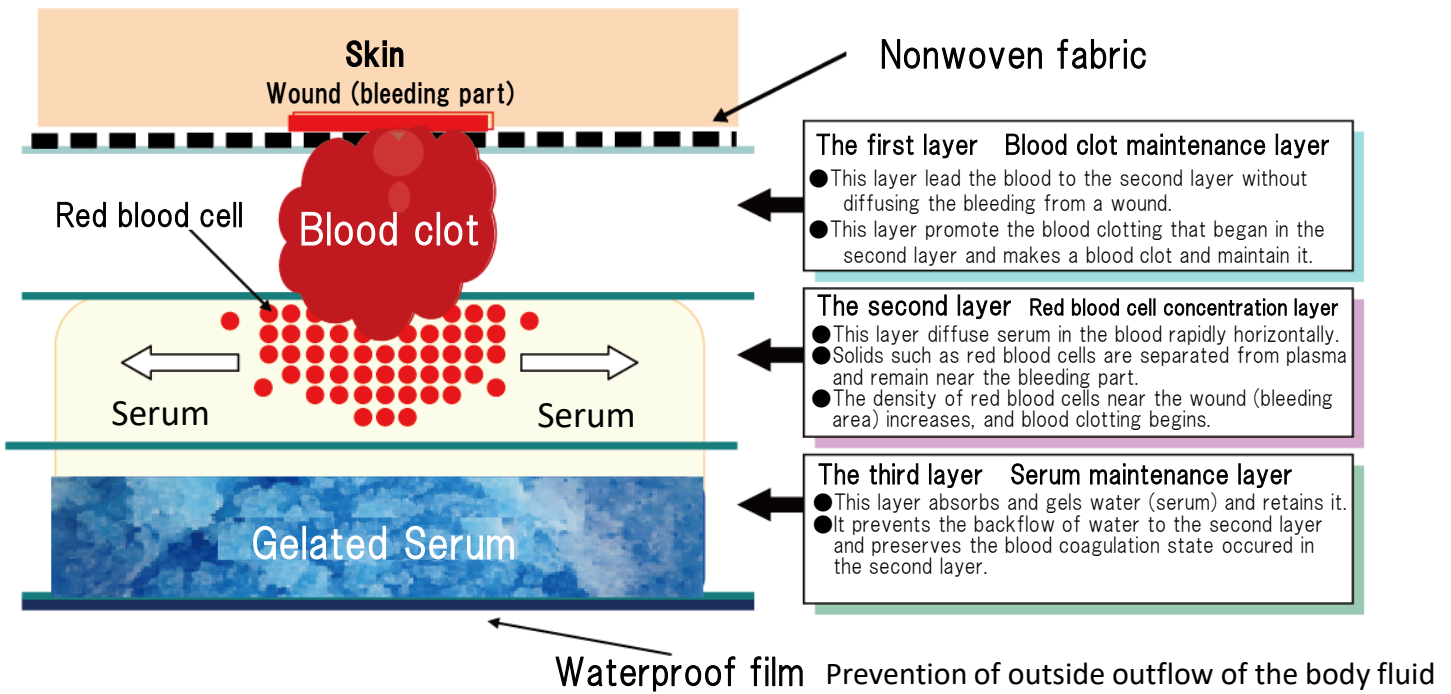

Hygienic & Reliable

The pad is sterilized, therefore there are no hygienic issues, and is approved as a medical equipment in Japan.

Made in Japan

Structure of J-PAD

■ Three unique laminar structure to stop bleeding by causing a blood clot on a wound.

Product specification

Aluminum outer bag

Sterilization bag

- Dimensions
Aluminum outer bag 140mm × 200mm
Pad body 130mm × 180mm
- Weight 23g
- Individual packing One piece / bag
